Subject: Draft SAP for Characterization of TPH-diesel at Former AST Area Red Hill
Date: Thu, 29 Nov 2001 14:04:13 -1000

Wes,

In response to our discussion as to the level of TPH-diesel concentration in soil that is required for the delineation of TPH contamination on a site, the Department of Health uses 25 mg/kg, the method reporting limit for TPH-diesel in soil analyzed by EPA SW-846 Method 8015B.

With this in mind, the Navy needs to change its sampling and analysis plan for the characterization and delineation of the extent of TPH-diesel contamination in the subsurface soil from the 5000 mg/kg level down to the 25 mg/kg level.

Should you have any questions, please contact me at 586-4653.
