Re: Draft Project Work Plans for Closure and Removal of the Red Hill Stilling Basin, Red Hill Navy Reservation, Oahu, Hawaii.

Dear Darlene:

The U.S. Environmental Protection Agency (EPA) has received the Draft Project Work Plans for Closure and Removal of the Red Hill Stilling Basin, Red Hill Navy Reservation, Oahu, Hawaii dated November 1994, which was prepared by OHM Remediation Services. We have reviewed the above document for consistency with the Revised Final of the Specifications for Closure of the Red Hill Stilling Basin, Fleet and Industrial Supply Center, August 1994, which was prepared by Ogden Environmental and Energy Services.

The review of the November 1994 Draft Project Work Plans indicated this document is generally consistent with the August 1994 Specifications for Closure of the Red Hill Stilling Basin. However, the Scope of Work of the Draft Project Work Plans should clearly specify the level of contaminated soil excavated be the same as in the Specifications for Closure document: "Soil excavation shall continue to the maximum limits or until all visually impacted soil has been removed, photoionization detector and organic vapor analyzer readings indicate that background ambient levels have been attained, and chemical sampling and analysis indicates that cleanup levels have been reached". The removal of the Red Hill Stilling Basin should also include a Close Out Report to recap all activities and deliverables.
