Subj: NAVY'S INSTALLATION RESTORATION (IR) PROGRAM

Enclosed is our Draft Remedial Investigation (RI) Sampling and Analysis Plan for the Characterization of TPH-Diesel at the former 8,000 Gallon Aboveground Storage Tank (AST) at the Red Hill Oily Waste Disposal Facility. Due to the State of Hawaii Department of Health (DOH) concern that total petroleum hydrocarbons exceed DOH Tier 1 Action Levels, the Navy has agreed to perform an additional investigation to further evaluate the extent of contamination in the area of concern. This plan describes the work planned for this additional investigation.

The submission of this document is in accordance with the Superfund Amendments and Reauthorization Act (SARA) of 1986 which requires federal agencies to coordinate closely with the regulatory agencies and Federal Natural Resource Trustees during Installation Restoration (IR) investigations.

We respectfully request that you review this document and forward your comments to us within 30 days of your receipt of our letter. If we do not receive a response from you within the 30-calendar day review period, we will finalize the document based on comments received from other agencies during the allotted review period. If you disagree with our planned actions, please let us know immediately.

Should you have any questions regarding this document, please contact Mr. Wesley Ching of our Environmental Restoration Division at (808) 472-1422.

Sincerely,

Melvin Z. Waki

MELVIN Z. WAKI, P.E.
Head
Environmental Engineering Department
